CLARIN-FR tutorial

Paris

2011-21-01

Overview

- Traditional metadata
- Component metadata
- Data categories
- The big picture
- In practice:
 - Building components
 - Using components

Traditional Metadata

project 1

project 2

project 3

Traditional Metadata: problems

- Lack of flexibility
 - Too many fields...
 - ... but not the ones I am looking for!
- Lack of interoperability
 - My metadata does not work with your infrastructure!
 - Nederland? Netherlands? The Netherlands? Holland? NL?

Context

- Other Metadata Infrastructures in our domain:
 - IMDI, OLAC/DC, TEI header
- Problems:
 - Inflexible: too many (IMDI) or too few (OLAC) fields
 - Limited interoperability
 - Problematic (unfamiliar) terminology for some sub-communities.
 - etc.

CLARIN Project - CMDI

- Metadata infrastructure based on a “Component Metadata Model”
- Aims
 - Flexibility
 - Researcher should themselves decide what metadata fits their needs
 - Offer ready made metadata components
 - Allow creation of new metadata components needed
 - Interoperability built-in
 - Complete Infrastructure: software for editing, harvesting, exploitation
 - Compatibility with existing frameworks: OLAC, IMDI

Component Metadata

project 1

project 2

project 3

Some terminology

- Element = atomic unit (a “field”) – e.g. recording date
- Component = set of elements – e.g. Actor
- Profile = set of components – e.g. OLAC profile
- Instance = one metadata description – e.g. `myresource.cmdi`

- Schema = technical (formal) grammar describing a profile – e.g. `olac.xsd`

Data Categories

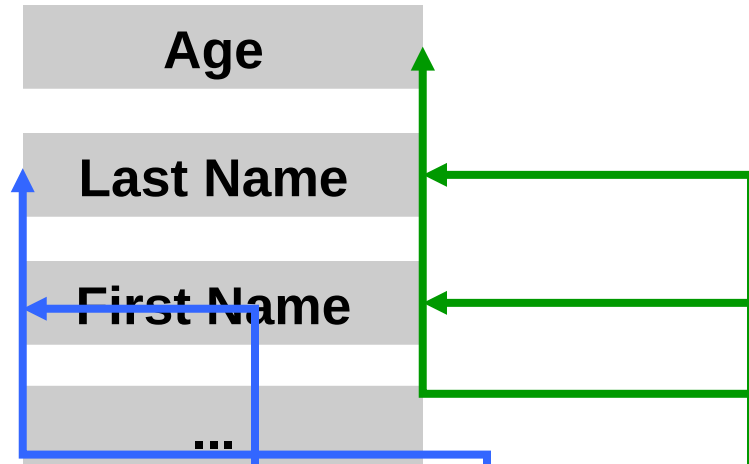

project 1

project 2

project 3

Data Categories

The big picture

Data Category

Building a component

Actor

firstName lastName

ActorLanguage

languageCode languageName

```
<CMD_Component name="Actor">
  <CMD_Element name="firstName"
ValueScheme="string"/>
  <CMD_Element name="lastName"
ValueScheme="string"/>
  <CMD_Component name="ActorLanguage">
    <CMD_Element name="LanguageCode"
ValueScheme="string" />
    <CMD_Element name="LanguageName"
ValueScheme="string"
ConceptLink="http://www.isocat.org/datcat/DC-1766"/>
  </CMD_Component>
</CMD_Component>
```

Using a component

Actor

```
[...]  
<Actor>  
  <firstName>Louis</firstName>  
  <lastName>Couperus</lastName>  
  <ActorLanguage>  
    <LanguageCode>nld</LanguageCode>  
    <LanguageName>Dutch</LanguageName>  
  </ActorLanguage>  
</Actor>  
[...]
```

firstName:
Louis

lastName:
Couperus

ActorLanguage

languageCode:
nld

languageName:
Dutch

A close look at a CMDI file

- A toy example:
 - <http://www.clarin.eu/cmd/example/example-md-instance.cmdi>
- A corpus description:
 - <http://www.clarin.eu/cmd/example/example-phonological-corpus.cmdi>

Process overview

- Check the Component registry:
 - Any profile that fits your needs?
 - If not:
 - Any component that fits your needs?
 - If not:
 - Create your own component!
 - Looking for a data category that is not there?
 - Create a new data category!
 - Combine components together in a profile
- Start Arbil or your XML-editor
 - Select the profile/XSD that suits your needs
 - Create metadata instances

Conclusions

- Building your own components and profiles is already possible
- Creating CLARIN metadata descriptions too
- This is **not** the complete infrastructure:
 - Format will be supported in the future
 - Component Registry and Arbil will be extended
 - Please, send your feedback!
 - To be expected: user friendly
 - Browsers / Repositories
 - search engines

Where to get the software?

- <http://www.clarin.eu/cmd>

Where to get support?

There's no need to be unhappy!

- cmdi@clarin.eu
